

## About Brain of SaunaSpace

**A man and a vision.** After building his own NIR lamp sauna upon recommendation from Dr. Wilson 5 years ago, our founder Brian experienced first-hand the healing power of sauna therapy. Though the NIR lamp saunas offer superior, more effective sauna therapy, NIR lamp sauna products were limited: build it yourself, or buy a really expensive, cumbersome traditional wood box design. What about a quality consumer product and that would be accessible to everybody?

**A fresh approach.** "Can it be made here in the USA, be professional grade with tool-free user-friendly design? Can it be lightweight, portable and safe, yet avoid use of plastic and chemicals, relying instead on the beauty of natural materials like wood, cotton and steel? And will it be affordable?" SaunaSpace® was created to develop innovative solutions to the demand for quality near infrared sauna products. For over 3 years we aggressively re-designed and prototyped the main sauna components: the NIR light panel, the sauna frame and the cover. Eventually, we were able to build our new production shop: robotic wood and textile machines, a team of trained craftsmen and production infrastructure to bring it all together.

**We hear you.** With in-house design, our product development evolves quickly. But it has always been you, the customer, and your invaluable feedback that has driven this process. Years of customer feedback led to our current design: custom-made steel hardware, plywood-free robotically-milled wood panels, portable tool-free assembly.
